# Equideum Health Creates Next-Gen Person-Centered Healthcare

Equideum Health builds Web3 person-centered healthcare and research networks called Data Integrity and Learning Networks (DILNs)\*. Equideum Health's groundbreaking solutions, Elevated Compute, and FHIRBlocks\*, are part of a technology framework and health data marketplace at the intersection of blockchain, artificial intelligence, and advanced privacy-enhancing technologies. They build on cutting-edge technologies from industry leaders like ConsenSys, Microsoft, and Intel, while relying on Intel® Xeon® processors and enhanced Intel® Software Guard Extensions to support their DILNs. Health data is the most sensitive kind of data there is and demands the highest standards of computing practices. By granting individuals greater control over the information about them, Equideum Health is paving the way for AI personalized well-being without compromising freedom and privacy.
